CAPSIL Project Period Report One

Grant Agreement:

April 2008 – June 2008

Lead Author: HMS Paolo Bonato

WP5 Summary

WP5 *Clinical and Ethnographic Requirements* aims to develop a taxonomy of clinical problems that mark the aging population in EU, US, and Japan. WP5 also aims at defining the goals of technology-based interventions that should be put in place based on the identified needs of the elderly population.

We plan to achieve part of the objectives of WP5 by generating Wiki entries that capture multiple aspects of the problems associated with the aging population from a clinical standpoint in the perspective of facilitating healthy aging and independent living.

Project Objectives for this Period

Reporting Period	April 2008 – June 2008
Leader	HMS
Total Actual Effort (man months, including the eligible and non eligible man months)	1.4 mm

Total actual effort for this task:

HMS	0.75 mm
UCD	0.25 mm
OHSU	0.25 mm
WUT	0.15 mm

Work Progress and Achievements during this Period

We identified stroke as one of the major conditions affecting the aging population and gathered data to develop a Wiki entry during the next period of the project. We used this case to develop a framework within which other entries will be developed.

Deliverables

Preliminary analysis of clinical requirements leading to the definition of a framework within which we will develop wiki entries.

Identification of major conditions that affect the aging population to be used as Wiki entries that exemplify how technology can be leveraged upon to promote healthy aging and independent living.
