

CAPSIL Project Period Report One

Grant Agreement:

April 2008 – June 2008

Lead Author: HMS Paolo Bonato

WP5 Summary

WP5 *Clinical and Ethnographic Requirements* aims to develop a taxonomy of clinical problems that mark the aging population in EU, US, and Japan. WP5 also aims at defining the goals of technology-based interventions that should be put in place based on the identified needs of the elderly population.

We plan to achieve the objectives of WP5 by defining a roadmap of clinical requirements and by generating Wiki entries that capture multiple aspects of the problems associated with the aging population from a clinical standpoint in the perspective of facilitating healthy aging and independent living.

Project Objectives for this Period

Total effort for this task:

HMS	0.5 mm
UCD	0.25 mm
OHSU	0.25 mm
WUT	0.1 mm

The objective of this task for the period covered by this report was to define the framework for the development of the roadmap.

Work Progress and Achievements during this Period

We gathered preliminary information concerning the aging population in Europe, the United States, and Japan. We leveraged upon this preliminary analysis of the needs of the aging population to define a framework within which we will further develop the roadmap during the next period of the project.

Deliverables

Preliminary analysis of clinical requirements leading to the definition of a framework within which we will develop a first draft of the roadmap.
